

## Plant Tissue Culture Laboratory

For superior farming, healthy, high quality, high yielding plants through micropropagation or tissue culture are essential. Plant Tissue Culture Laboratory, RARS offers plants with uniform yields, good selection of right varieties, resistance against disease and larger yield compared to conventional planting materials.

The main production activities of this tissue culture lab are -

- Banana -different varieties of banana including nendran, giant nendran, mindoli, poovan etc.
- Strawberry- highly commercially valuable varieties like sweet Charlie, winter dawn etc.
- Orchids - different types of orchids including phelenopsis, dendrobium, vanda etc.
- Anthurium
- Different varieties of rose
